1. RE: HSLA, we presume that what you are saying is that the Gordon GD-033 was approved based upon a tensile/ultimate strength criteria, prior to the CAPA TC stipulation that the justification be submitted to DTL-D. We would have submitted it to Steve Lawrence, B-Lab Metallurgical Consultant and from what Steve said he would not approve it based upon a strength criteria only. However, we would not normally retract a previous approval, so it has stood for over two (2) years.

Now that Gordon wants to use a thinner higher strength cold rolled steel, we must submit it to Steve Lawrence for comment. Therefore today we are sending to Steve your complete proposition and expect an answer within a week.
